

MINUTES N° 023

Governance Committee ZERO Energy

Date: 29 July 2026 **Time:** 9:00 AM **Duration:** 1:06 h **Modality:** Virtual

1. Opening of the session

The Governance Committee holds its weekly session with partial attendance of its members. The presence of a sufficient quorum to address the items on the agenda is confirmed. Given the extent of the agenda, it is agreed to prioritise the most urgent matters.

2. Airdrop course format — Recorded modules and live sessions

The committee analyses the most appropriate format for the training course associated with the project's airdrop. The initial proposal of one or two lengthy live sessions is submitted for review.

Agreement

- It is agreed to structure the course into **five recorded modules of approximately 45 minutes** each, allowing participants to progress at their own pace without depending on fixed dates.
 - The possibility of linking the progressive delivery of merit tokens to the viewing of each individual module will be explored, rather than a single delivery upon completion.
 - The recorded modules will be complemented by periodic live sessions of shorter duration (approximately 1.5 hours), focused on follow-up, Q&A and community engagement. It is assumed that participants will have viewed the recorded material prior to each live session.
 - The change of format will be communicated to the technical team responsible for the platform so that the token delivery system may be adapted accordingly.
-

3. Compensation plan — Public communication

The committee reviews the manner in which the project's compensation plan is communicated to the community and to new participants, with the aim of simplifying the message and improving clarity for newcomers.

Agreement

- No modifications are made to the structure of the current compensation plan.
- In the recorded course and in public presentations, reference will be made exclusively to the direct referral reward, in a clear and straightforward manner.
- Complete information regarding the plan will remain available through the project's support channels.

4. Blockchain infrastructure decision: migration to the Base network

The committee addresses the strategic decision regarding the blockchain network on which the ZERO Energy token and infrastructure will be built. A comparative analysis of the evaluated options is presented.

Agreement

- **It is decided that the ZERO Energy token will be built on the Base network**, an Ethereum Layer 2 (L2) developed by Coinbase, rather than the Polygon network initially considered.
 - The principal arguments supporting this decision are: enhanced security through direct inheritance of Ethereum network validation, growing institutional adoption of Base for tokenisation projects, native compatibility with widely used wallets, and stronger image positioning for an energy infrastructure project.
 - The presale will also migrate to the Base network, so that future investments will be received in USDC on said network.
 - Coordination with the technical team will be undertaken to migrate the presale platform from Polygon to Base.
 - Compatibility with the services recommended to the community will be verified and the necessary adaptations will be coordinated.
 - New presale purchase tutorials adapted to the Base network will be prepared, covering both centralised exchanges and decentralised wallets.
 - A comparative technical summary between Base and Polygon will be distributed internally for the information of all committee members.
-

5. Airdrop strategy — Messaging and acquisition channels

The committee analyses the communication and acquisition strategy for the airdrop, with the aim of maximising both the reach and the quality of participants.

Agreement

- It is agreed to reorient the airdrop messaging towards the values of **belonging, governance and participation in the project**.
- The use of **platforms specialised in airdrop missions** (including Galxe, QuestN and Delix, as well as others to be identified) will be explored in order to reach a broader participant base by assigning merit tokens to specific missions (social media following, etc.). The cost models and accessibility of each platform will be evaluated.
- A project presentation dossier will be prepared to facilitate outreach to content creators, distribution platforms and other relevant channels.
-

The committee will continue to manage the project's corporate social media accounts (TikTok, Discord, Reddit, Twitter/X, YouTube, Facebook and Instagram) and will coordinate content amplification actions through the available channels.

6. Regulatory matters — Informational note

Information

- The committee maintains ongoing monitoring of the regulatory framework applicable to the project and will coordinate the relevant legal reviews as development progresses.
-

7. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
