

MINUTES N° 019

Governance Committee ZERO Energy

Date: 1 July 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The ordinary session of the Governance Committee corresponding to the first Wednesday of the month is hereby opened, which enables a full session with no restriction on duration. The committee recalls the new meeting structure previously approved: on ordinary Wednesdays, a 30-minute committee meeting is held (09:00–09:30) followed by a working meeting with the marketing team (09:30); on the first Wednesday of each month, the committee session is held in full and the marketing meeting is rescheduled to 10:00. It is noted that the subsequent working meeting will not take place this week due to the unavailability of the marketing team.

2. Digital marketing strategy update

The committee reviews the status of ongoing work with the marketing team. It is reported that the project's landing page is currently under construction and that the project's social media presence has experienced significant growth in recent weeks. The objective for the month of July is to define and design the project's training course, work on which commences as of this date. Working sessions with the marketing team are held on Mondays, Wednesdays and Fridays at 09:30.

Conclusion

- The project's strategy pivots definitively towards online digital marketing.
 - The strategy focuses on the digital channel, deferring in-person events to a later phase.
 - The committee is fully aligned with this change of direction.
-

3. Airdrop strategy: conversion funnel mechanics

The committee analyses in detail the airdrop mechanics and the conversion funnel designed to attract new users and investors. The complete flow is presented, comprising the following stages:

1. **Advertising acquisition** directed primarily at Latin America (Colombia, Mexico and Argentina in the first phase). Registered participants will have access to a referral programme. 2. **User registration** via a landing page with email validation. 3. **Onboarding to the ZERO Energy platform**, where the user automatically receives a Merit token reward as a welcome incentive. 4. **A sequence of six informational screens** within the user dashboard:

- *Screen 1:* Welcome message and emotional impact statement about the project.

- *Screen 2:* Confirmation of the reward received and invitation to discover further rewards.
- *Screen 3:* Presentation of the referral programme (additional Merit tokens for validated referrals).
- *Screen 4:* Access to an introductory training course on cryptoeconomics and digital assets, offered free of charge and exclusively to airdrop participants. This screen blocks progression until the user accesses the course landing page.
- *Screen 5:* Getting-started guide and ZERO Energy business plan.
- *Screen 6:* Information on the ZERO token presale phase and access to purchase.

It is noted that a maximum cap on tokens for the airdrop has been established, the details of which will be recorded in the project's technical documentation. The primary objective of the funnel is not solely the distribution of tokens, but the conversion of participants into investors through the training course.

Agreement

- The airdrop mechanics and the six-screen sequence are hereby approved in principle.
 - Technical implementation remains pending development.
-

4. Regulatory framework of the airdrop

The committee analyses the regulatory implications of the airdrop launch, with particular attention to the European MiCA regulation and the applicable tax legislation for token recipients across different jurisdictions.

The committee examines the regulatory and fiscal implications of the airdrop in various jurisdictions, without this constituting fiscal or legal advice. Paid advertising campaigns will be directed primarily at Latin America (Colombia, Mexico and Argentina), in line with the project's expansion strategy.

Agreement

- It is agreed to conduct a more thorough legal analysis prior to the airdrop launch, with particular focus on the implications of MiCA and users' tax obligations across different jurisdictions.
 - Paid advertising campaigns will be directed primarily at Latin America (Colombia, Mexico and Argentina).
 - Economic terms and the details of the legal analysis are recorded internally.
-

5. Treasury governance and multisig structure

The committee reviews the current state of the project's treasury. Financial details are of an internal nature and are recorded in the corresponding internal minutes.

With regard to governance, the need to expand the treasury's multi-signature (*multisig*) structure is addressed, with the aim of enhancing the security and transparency of the project. It is agreed to expand the treasury multisig structure to increase security and the decentralisation of governance, incorporating committee members as signatories.

It is recalled that under the DAO governance model, the approval of financial agreements is formalised through transactions on the multisig, with the transaction identifier (*TXID*) serving as immutable proof on the blockchain.

Agreement

- A treasury movement previously approved at an earlier session is hereby formally ratified, with a record thereof established via TXID on the blockchain.
 - It is agreed to organise a meeting at which all committee members will configure their decentralised wallets and be incorporated into the multisig.
 - Each committee member must have a hardware wallet device or compatible software wallet available prior to said meeting.
-

6. New presale pricing structure

The committee discusses a proposal to revise the presale pricing structure for the ZERO token, motivated by the intention to offer more flexible conditions tailored to different investor profiles.

6.1 Diagnosis

The committee analyses the current distribution of investments and examines mechanisms to incentivise greater participation volume. The conditions of participants from earlier phases are maintained in full.

6.2 Proposal: volume-based rebate

It is proposed to replace the sequential tier model with a **variable pricing model based on investment volume**, in which all tiers are available simultaneously. Under this model, the unit price of the Z0 token would be more favourable the greater the investment made, thereby rewarding investors with higher conviction. The exact ranges remain subject to final adjustment and are recorded in the internal minutes.

6.3 Complementary proposal: exclusive allocations for large investors

It is proposed to make available a limited number of exclusive allocations for investors exceeding an internally agreed threshold, to whom an additional Merit token bonus would be offered. The details of the conditions are recorded internally.

6.4 Incentives for high-volume investors

The committee analyses various incentive alternatives and opts for the volume-based rebate model, considered to be the most straightforward option to implement and communicate.

Agreement

- The **volume-based rebate** model for the presale is approved in principle. Its technical feasibility will be consulted with the development team prior to implementation.
 - The creation of a limited number of exclusive allocations for large investors with a Merit token bonus is approved.
 - Both measures must be implemented prior to the launch of the training course, scheduled for the first days of September.
 - The change in structure will be communicated to the community once technical implementation is complete.
-

7. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
