

MINUTES N° 015

Governance Committee ZERO Energy

Date: 27 May 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The Governance Committee convenes its ordinary session with the aim of reviewing the project's acquisition strategy, analysing the operational status of social media channels, and defining the next lines of action. The session is conducted in two phases: an internal committee meeting followed by a working meeting with an external collaborator.

2. Review of the acquisition strategy

The committee conducts an in-depth analysis of the current acquisition model and concludes that it is necessary to pivot towards a mass digital acquisition approach, reorienting the strategy towards digital channels as the primary growth axis. The advantages offered by digital advertising platforms for precise and scalable segmentation and reach of the target audience are assessed.

Agreement

- The adoption of a digital acquisition model as the primary growth axis, complementary to existing community-based activities, is approved.
 - A dual digital acquisition strategy is adopted, based on two complementary lines: a ZERO Energy token airdrop programme and a periodic educational programme aimed at converting new investors.
 - Both lines will be executed in parallel and will converge in the educational programme as the central point of conversion.
-

3. ZERO Energy Airdrop Programme

The committee defines the mechanics of the airdrop programme as the first pillar of the new acquisition strategy. The objective is to attract users from the crypto ecosystem through a token reward, conditional upon the completion of project awareness and dissemination actions.

Agreement

- Participants will receive an amount of ZERO Energy tokens in exchange for completing a series of verifiable actions: viewing project informational materials, following official social media accounts, and sharing the project within their network of contacts.
-

Access to the airdrop will be managed through a single-use referral link system with rotating codes, in order to guarantee the integrity of the process and prevent fraudulent use.

- Authorised participants will be provided with referral links to promote the airdrop.
 - Verification of the required actions will be automated through artificial intelligence tools.
-

4. Periodic educational programme

The committee approves the reactivation and structuring of a monthly online educational programme, aimed at both the general public interested in economics and cryptocurrencies and potential project investors.

Agreement

- The programme will be delivered in a weekend format (Saturday and Sunday) via videoconferencing platforms.
 - The Saturday session will be free of charge and will cover introductory content on economic history, crypto market trends, and tokenisation.
 - The Sunday session, also free of charge, will be dedicated to an in-depth presentation of ZERO Energy: the business model, protocol, compensation plan, and comparisons with other projects in the sector.
 - An advanced module is envisaged, with access subject to criteria that will be communicated in due course.
 - All traffic generated by the airdrop and direct acquisition campaigns will converge in this educational programme as the central conversion mechanism.
-

5. Social media status and technical management

The committee reviews the operational status of ZERO Energy's official social media profiles. A technical issue is identified that prevents the management and automation of publications on Instagram and Facebook due to access restrictions on the linked account.

Agreement

- An immediate timeframe is agreed upon to attempt to resolve the access issue and unlink the Instagram account from the structure preventing its management.
 - Should this prove unresolvable, a new official Instagram account will be created, with a gradual publication strategy to consolidate presence without risk of penalty from the platform.
-

6. Incorporation of a digital advertising specialist

In order to ensure professional and continuous management of advertising campaigns on Meta (Facebook and Instagram), it is agreed to reinforce the operational team with specialised capabilities in paid digital advertising.

Agreement

- A professional specialising in digital advertising campaign management is incorporated into the team.
 - Her responsibilities will include: design and optimisation of Meta campaigns, definition of audiences and customer avatars, automation of lead nurturing through the platform's internal tools, and ongoing monitoring of campaign performance.
 - It is agreed to begin with a testing and algorithm learning phase prior to scaling advertising investment, in accordance with the platform's best practices.
-

7. Events and meetings calendar

The committee reviews the calendar of in-person events and periodic meetings in light of the newly approved strategy.

Agreement

- The in-person event scheduled for Sunday, 31 May will take place as planned, after which in-person events will be paused while the new digital model is consolidated.
 - From that date, in-person events are suspended until the new digital acquisition system is operational and validated.
 - Governance Committee meetings will adopt a monthly frequency, optimising working time in alignment with the project's new operational phase.
-

8. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
