

MINUTES N° 024

Governance Committee ZERO Energy

Date: 5 August 2026 **Time:** 9:00 AM **Duration:** 1h 21 min **Modality:** Virtual

1. Opening of the session

The Governance Committee of ZERO Energy holds its regular weekly session with full attendance of all its members. The presence of the ambassadors is confirmed and the committee proceeds to address the items on the agenda, previously communicated through the committee's internal channels.

2. Blockchain network migration: from Polygon to Base

The committee formalises the agreement to migrate the blockchain network, consolidating prior technical analyses. The technical and operational advantages of the Base network (Ethereum L2) over Polygon are presented, with particular emphasis on improvements to payment infrastructure, wallet integration, and the resolution of transaction blockages identified on the current network.

It is reported that the technical configuration required to enable token purchases via card on the Base network — including the automatic delivery of a small amount of ETH to cover network fees (gas fee) — will be available during the week of 10 August 2026.

Agreement

- ZERO Energy officially migrates its blockchain infrastructure from the Polygon network to the Base network.
 - All materials, references, and technical systems previously indicating Polygon will be updated accordingly.
 - Tutorials will be produced to guide users through the token purchase process on the new infrastructure.
 - Technical changes will be coordinated with the development team, with an estimated deadline of the week of 10 August 2026.
-

3. Airdrop strategy: training course and token delivery mechanics

The committee engages in an in-depth discussion on the design of the training course linked to the project's airdrop, addressing the format, viewing control mechanisms, the inclusion of per-module assessments, and the hosting platform.

3.1 Course format

A proposal is put forward to replace the live session format with pre-recorded modules, immediately accessible through a dedicated project landing page. This format allows for greater scalability, translation into multiple languages, and unrestricted access regardless of date. It is agreed to complement this with a monthly live session for community engagement and Q&A.

Agreement

- The course will be structured into 4–5 pre-recorded modules hosted on a dedicated platform.
- A monthly live session of a complementary nature will be held.

3.2 Viewing controls and per-module assessments

The technical mechanisms to ensure that participants engage with the content effectively are analysed. It is agreed to disable accelerated playback and to require that the viewing window remain active for at least 85% of the duration of each module. Additionally, a mandatory assessment test will be incorporated at the end of each module, the passing of which will be required to unlock the next. Successful completion of each test will carry an additional token reward.

Agreement

- Playback at normal speed only, with no option to accelerate.
- Minimum viewing requirement: 85% of each module.
- Mandatory assessment test at the end of each module to unlock the next.
- Additional token reward for each successfully completed test.
- Content will not be subject to screenshot restrictions, as maximum dissemination is the intended objective.

3.3 Hosting platform

Agreement

- The course will be hosted on a dedicated project landing page, featuring a user registration system, per-module viewing tracking, and integrated assessment tests.

3.4 Course content

The course aims to present the ZERO Energy project in depth, enabling airdrop participants to understand its full scope and potential. The planned structure encompasses the following thematic blocks:

- Introduction to the economic and technological context of the sector.
- Project business plan.
- Team, partners, and ambassadors.
- Tokenomics: presale tranches and liquidity model.
- Benchmark projects in the sector and appreciation potential.
- Access to the project's public information repository (GTA).

Agreement

- Provisional course title: "**Behind a Token**".

- Structure of 4–5 modules covering the content described above.

3.5 Personalised session option for investors

A proposal is made to incorporate into the course landing page the option to book a personalised session with the project team, aimed at investor profiles wishing to explore the project in greater depth. This option will be available through an access mechanism linked to the project's ecosystem. The intended technical flow is: payment gateway 'appointment booking platform.

Agreement

- A paid personalised session option will be added to the course landing page.
 - Access obtained is redeemable in project tokens and merits.
 - The technical team will coordinate the implementation of the payment gateway and the appointment booking system.
-

4. Institutional communication of the airdrop

The committee reviews the language and communicative approach of the airdrop, with the aim of differentiating from messaging that has become overused in the sector and of generating a genuine perception of value among participants.

It is agreed to evolve the communicative approach of the airdrop towards a message centred on the project's differential value. The core message will revolve around exclusivity, active participation in project governance, and early access to a distinctive opportunity.

The concept of a **token circular economy** is also raised: designing products and services within the ZERO Energy ecosystem that can be acquired using the tokens distributed through the airdrop, thereby generating a cycle of real utility and recovery of issued tokens.

Agreement

- The institutional messaging of the airdrop will focus on exclusivity, active participation, and early access.
 - The full set of airdrop benefits will be listed explicitly: tokens, training course, access to partners, integrated wallet, covered gas fee, and personalised session option.
 - A trailer video of approximately 2 minutes will be produced for project outreach purposes.
 - A concrete token circular economy proposal will be developed for presentation at the next session.
-

5. International strategic contacts

The committee takes note of progress made in establishing international strategic relationships, resulting from recent outreach efforts by the committee. Advances are reported in the opening of strategic international relationships across various markets, the follow-up of which is ongoing.

Information

- It is reported that the committee maintains exploratory contacts at the international level, with no formal agreements in place at this stage.
 - The committee agrees to promote the international projection of the project.
 - The committee views positively the initiatives undertaken to raise awareness of the project.
-

6. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
