

MINUTES N° 016

Governance Committee ZERO Energy

Date: 3 June 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The Governance Committee holds its sixteenth ordinary session with the aim of reviewing the project's acquisition strategy, defining digital growth tools, and addressing the structure of community meetings. The attendance of the majority of permanent ambassadors is confirmed and the session is called to order.

2. Transition to a digital acquisition model

The committee analyses the performance of the acquisition model based on in-person events and concludes that, while it has delivered value in earlier phases of the project, it is not scalable within the required timeframes and at the pace of growth demanded. Limitations are identified in terms of reach, operational cost, and replicability.

Agreement

- It is agreed to pivot towards a digital acquisition model as the primary strategy, supported by social media advertising campaigns, automated conversion funnels, and content targeted at specific niches.
 - In-person events are not ruled out for future phases, once a critical mass of digitally acquired participants has been reached.
 - The design and deployment of the necessary technical infrastructure is initiated immediately: landing pages, funnels, tracking systems, and referral links.
-

3. Airdrop strategy as a mass acquisition mechanism

The committee examines the use of a merit token airdrop as an acquisition tool aimed at the crypto ecosystem, with a particular focus on the Latin American audience. The attraction potential of the airdrop mechanic within this segment and its capacity to generate an active community are assessed.

Agreement

- The launch of a merit token airdrop is approved as a mass acquisition action, contingent upon participants completing a set of straightforward tasks (following official channels, viewing content, joining community groups, among others).
- The required actions are in the final definition phase and will be published once finalised.
- The airdrop will be integrated as the first step of the digital conversion funnel, connecting with the subsequent project presentation phases.

4. Conversion funnel: online training programme as a presentation tool

The structure of a two-phase online training programme is presented, conceived as the central tool of the conversion funnel. Its objective is to guide participants from their first contact with the project through to a thorough understanding of its value proposition.

Agreement

- The two-phase training programme structure is approved:
 - **Introductory phase (free of charge):** Weekend sessions aimed at contextualising sector trends (crypto-economics, tokenisation, renewable energy) and presenting the ZERO Energy project in detail.
 - **Advanced phase:** Specialised in-depth modules, including content on crypto-asset taxation, with access linked to project participation conditions.
 - The training cycle will be repeated on a periodic basis in line with the demand generated by digital campaigns.
 - The programme structure will be designed and the corresponding content developed immediately.
-

5. Incorporation of a digital traffic specialist

The committee agrees to strengthen the team's capabilities in digital traffic management through the incorporation of specialised profiles. This addition is considered key to the operation of the new acquisition model.

Agreement

- The process of incorporating the specialist is approved, with a defined results horizon for the first period of activity.
 - The effective commencement of the collaboration will be conditional upon the team having the necessary materials prepared (audiovisual content, account access, creative assets) so that the specialist may operate without delay.
-

6. Structure of community meetings

The committee reviews the structure of weekly meetings directed at the project's community of leaders and agrees on a reorganisation aimed at optimising participation and ensuring coherence with the new operational model.

Agreement

- Two weekly meetings announced to the community are maintained:
- **Monday:** Weekly kick-off meeting, motivational in nature and brief in duration (~30 minutes).

- **Wednesday:** DAO meeting, aimed at consolidating the habit of community participation in this space.
 - The structure will be reviewed once the digital acquisition system is fully operational.
-

7. Leadership activity in community groups

The committee agrees to intensify active presence in community groups as part of the growth and cohesion strategy.

Agreement

- It is agreed that all committee members increase their activity in community groups through the publication of valuable content, motivational messages, and active participation in discussions.
 - It is agreed to review and optimise the structure of the leaders' group in forthcoming sessions.
-

8. Update on ranks and reward structure

The committee receives information on the current status of ranks within the ZERO Energy system and on an update to the reward structure associated with those ranks.

Information

- It is reported that the rank-based reward structure will be updated, transitioning to a system of direct token parity. The technical details of this change will be communicated to the community through official channels once formalised with the development team.
 - The committee reaffirms its commitment to advancing within the rank system as an example to the community.
-

9. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
