

MINUTES N° 029

Governance Committee ZERO Energy

Date: 8 July 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The Governance Committee holds its weekly session in virtual format. The meeting begins with a brief delay due to technical connection issues. The agenda items are reviewed with the members present.

2. Assessment of audiovisual production

The committee analyses recently published videos and positively evaluates the overall quality of the material produced. Two areas for technical improvement are identified for upcoming recordings.

Conclusion

- It is agreed to explore the option of applying digital background blur through the stabiliser application, with the aim of highlighting the presenter against the surrounding environment.
 - It is agreed to pay greater attention to backlight management during recording, in order to avoid excessive corrections in post-production.
 - A technical audiovisual meeting between the members involved remains pending to address these aspects in greater depth.
-

3. Technical incident in published video

The committee reviews a quality incident detected in the video published on 7 July. The technical cause is analysed and corrective measures are adopted.

Conclusion

- The cause of the quality degradation was the combination of recording under backlight conditions with luminosity correction in post-production, which saturated the dynamic range when compressing the file for publication.
 - It is agreed to incorporate fill lighting (ring light with colour temperature correction) in future recordings to avoid the need to compensate for backlight during editing.
 - The affected video was corrected and published successfully.
-

4. Production criteria for social media content

The committee reviews and updates the video production criteria applicable to social media publications, with particular attention to user behaviour on platforms such as Instagram.

Agreement

- It is agreed that each video must open directly with the main message or pain point, without preambles or introductory phrases. The impact must occur within the first three seconds.
 - It is agreed to maintain strong visual contrast from the very first frame, particularly considering that many users view content without sound while scrolling through the platform.
 - These two criteria shall be applied consistently across all future videos, regardless of the style chosen for each individual piece.
 - Scripts and pieces already produced will be reviewed in order to apply these criteria wherever possible without altering the content.
-

5. Training landing page: structure and photography

The committee reviews the current status of the training landing page under construction and agrees on adjustments to its structure and visual elements.

Agreement

- It is agreed that the landing page must present the trainer's authority and credentials at the top of the page, prior to setting out the course content.
 - It is agreed to select a header photograph that conveys visual authority to the visitor immediately upon arrival.
 - The construction of the landing page will follow the reference model agreed upon internally, adapting the typography and corporate colours of ZERO Energy.
-

6. Photography session in a professional audiovisual environment

The committee is informed of the planning of a photography session in a technologically sophisticated audiovisual environment, with the objective of obtaining authoritative graphic material for corporate and training purposes.

Agreement

- It is agreed to hold the photography session from 24 July onwards, coordinated internally among the members involved.
- The material obtained will be used both for ZERO Energy's corporate purposes and for the training landing page.

7. New tiered investment pricing system

The committee addresses the transition from the current pre-sale stage to a new tiered pricing system based on investment volume, referred to internally as "**investment scaling**".

Agreement

- It is confirmed that the new tiered pricing system was approved at the previous session by vote and subsequent consultation with the committee.
 - A two-phase communication strategy is approved: in the first phase, the end of the current open purchase stage will be announced; in the second phase, the full details of the new tiered system will be communicated.
 - All communications must be truthful at all times. No statements shall be made that could prove contradictory to the actual conditions of the new system.
 - The use of the terms "meritocracy" or "merit system" to describe this mechanism is discarded, in order to avoid confusion with the community merit system. The adopted working name is "**investment scaling**".
 - The indicative dates are as follows: communication of the change to begin from **15 August**; full launch of the new system alongside the airdrop on **1 September**.
 - It is agreed to begin communication immediately through the usual channels: the leadership group, the broadcast channel, and the community newsletter.
-

8. Meta advertising campaign report — First month

The results report for the first full month of the advertising campaign on Meta (Facebook and Instagram) is presented.

Information

- The campaign has accumulated one month of activity with positive results in cost per visit and follower growth.
 - The cost per visit has improved compared to the start of the campaign.
 - The primary source of new followers is Instagram.
 - The fourth-week video has been incorporated into the active set of pieces running in the campaign.
 - It is confirmed that the YouTube channel is active and that Instagram videos are published in parallel as Shorts on that platform.
 - It is agreed to maintain advertising investment at current levels.
-

9. Direct messaging strategy on Instagram

The committee analyses the effectiveness of the direct message sent to new Instagram followers inviting them to join the Telegram channel, and examines options to improve conversion rates and automation.

Conclusion

- It is agreed to establish an approximate weekly tracking of the number of direct messages sent and the growth of the Telegram channel, as a conversion indicator.
 - It is agreed to explore the strategy of publishing posts with a call to action via comment, which enables the automatic sending of direct messages to any user who interacts, regardless of whether their account is public or private.
 - The validation of the Meta business account will enable the automation of direct message sending in the future, improving the efficiency of the current process.
-

10. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
